

Current Topics in Science 30S

Credit Value: 1.0

Pre-requisite: Science 10F & 20F

A portfolio on a chosen world issue with an accompanying term paper is due during the course.

Course Description:

The field of science is constantly evolving and the Current Topics in Science course seeks to address current topics, issues, points of view, and innovations in all disciplines of science. Critical thinking, problem solving, research, and project completion are emphasized. In this course the students and teacher are able to select the topics or issues that will be addressed in the class. The possibilities are endless but can include such topics as: forensic science, stem cell research, evolution of human species, sports science, and much, much more.
